

Problems

Students need a better way to form study groups

Students need a better way to collaborate

Students can have problems finding help on assignments

Students need a way to connect with people with similar interests outside of classes

Solution

Social Media app to allow students to make study groups and collaborate

the app provides support for students when and where they need it

Groups and clubs can advertise meetings and events

Have digital or interactive boards around campus to organize groups and meetings

Details

students can make groups for others within that major/course to join

creating an account with a certain major

Hyperlink interactivity?

A group chat section that students in similar classes can communicate with each other

Possibly have specific spaces with resources for students

Image/video sharing?

Other Functions

List students and classes that have groups formed

Students could use the app to create hangouts

Have open and invite-only groups

Instructors could communicate directly with specific groups

Easy to form and communicate with clubs and groups

Drawbacks

Could need censorship for inappropriate groups

Could be used for cheating i.e. sharing test and homework solutions

It might be difficult to keep it focused on school/students

is reliant on people to form and run their own groups
